Coffee Enjoyment

MELITTA® CALIBRA®

PRECISION FOR A PERFECT AROMA

Perfect taste and full-bodied flavour are particularly important to coffee lovers. Both are, without a doubt, best achieved by using freshly ground coffee. Any connoisseur should therefore have a coffee grinder in their household.

Quality, precision and individual preferences have recently become more important when it comes to making coffee. Consequently, consumers are becoming more and more interested in high-quality appliances. This inspired us to develop the Melitta® Calibra® – an electric coffee grinder that features a special range of functions, high-quality materials and a modern design.

The Calibra® has a practical angled operating panel which allows you to choose between three grinding programs: if you want to keep things simple, you can use automatic grinding for the number of cups you want. If you know exactly how much coffee tastes best, you can select the function for grinding precise gram quantities. Alternatively you can also control the amount of coffee being ground manually by using the grinding duration.

HIGHLIGHTS

Steel cone grinder

The heart of the Calibra® is a high-precision, durable steel cone grinder.

Integrated digital scale for grinding accurately to the gramme

An innovative highlight of the Calibra® is the integrated digital scale that can grind accurately to the gramme for making all types of coffee.

39 variable grind settings for making all types of coffee

39 variable grind settings from coarse to fine for making your favourite coffee. Whether espresso, filter coffee or coffee from a cafetière - with the Calibra you always get perfect freshly ground coffee.

User-friendly operating panel with display

The inclined operating panel with LCD display means it is easy to select from the various grind options.

Variable use

Thanks to the integrated tare button with zero setting feature, you can grind the exact amount of coffee you need whatever your coffee is held in - such as a 1x4® coffee filter or a porta filter.

Removable bean container

The removable bean container has a capacity of up to 375 g of coffee beans.

Removable coffee container

The coffee collection container has a capacity of up to 200 g and is removable.

Steel cone grinder

39 variable grind settings

We recommend:

- For espresso level 1–5,
