Coffee Enjoyment

LATTICIA® OT

MILK AT ITS BEST!

The new Melitta® Latticia® OT will convince you with perfect milk froth, intuitive one-touch operation and its space-saving modern design.

The slim, 20 cm wide automatic coffeemaker not only features our high Melitta® quality, but also an all-new milk system – the LATTEperfection system. Thanks to double milk frothing, it produces particularly fine and hot milk froth. The direct keys allow you to prepare café crème, cappuccino, latte macchiato and also milk froth very simply with one touch. Double Cup mode makes two cups of a coffee beverage when you press the corresponding button twice. Furthermore, the extra large bean container and water tank also ensure a particularly large amount of coffee enjoyment.

Melitta® Latticia® OT – coffee enjoyment at the push of a button.

HIGHLIGHTS

LATTEperfection System

The new LATTEperfection system makes milk froth wishes come true at the push of a button. The double milk frothing function produces wonderfully fine milk froth and high temperatures.

One Touch

You can select café crème, cappuccino and latte macchiato directly by touching the coloured real image buttons. You also get milk froth and hot water simply and conveniently with one touch.

Super-silent grinder

You can make yourself a freshly ground coffee without waking anyone. Your automatic coffeemaker has a super-silent steel conical burr grinder that grinds the coffee beans quickly and quietly.

Extra large water tank and bean container

The Latticia® OT has a removable extra large water tank with a holding capacity of 1.5 l as well as an extra large bean container with 250 g holding capacity.

Smart support

You want to know more? Download the Melitta® Companion® app onto your smartphone. The best way to discover the practical information and tutorials is with a cup of coffee. You will also get fast service via the app of course.

UNIQUE ENJOYMENT

Aromatic coffee enjoyment

The new pump control system enables an ideal contact time between the water and coffee. You can now enjoy the two coffee classics of espresso and café crème with even better developed coffee aromas.

Italian preparation process

Coffee? Milk? Foam? What was the order again? It is good to know the original Italian recipes. The clever Italian preparation process is guaranteed to put the ingredients together in the right order.

Adjustable brewing strength

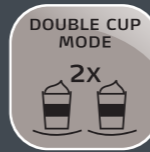

You can set the intensity of your coffee easily to mild, medium or strong. You can, of course, also adjust the coffee quantity. Variable – to suit your own taste.

Five grinding fineness settings

Coffee for gourmets – freshly ground from whole coffee beans.

INTUITIVE OPERATION

Double Cup mode (2-cup function)

Despite being just 20 cm wide, the Latticia® OT has enough space to easily prepare two coffee beverages with milk at the same time.

Height-adjustable coffee outlet

The outlet height can be adjusted to up to 135 mm so you can also use glasses or large-sized mugs.

Continuously variable quantity adjustment

You can set the quantity anywhere between 25 and 220 ml both for coffee drinks and coffee beverages with milk.

Anti-scratch

The new drip tray design features a stainless steel drip plate with a high-quality integrated anti-scratch plastic insert.

SIMPLE CLEANING AND CARE

Quick & Clean

The new milk system cleaning function makes cleaning particularly straightforward and hygienic.

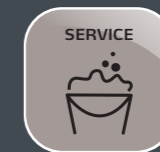

Automatic cleaning and descaling program

Communication is everything. The Latticia® OT automatically displays a message when it needs cleaning or descaling.

Removable brewing unit

The complete brewing unit is simple to remove and easy to clean. You can then access the interior of the machine and clean it without any problems.

Service button

The service button provides fast access to the cleaning and descaling program, to the brewing temperature and water hardness settings and to the Auto-OFF function. Changing the filter is very simple too.

Water filter compatibility

It is best to use Melitta® Pro Aqua water filters – then your coffee will taste even better. One further advantage: your automatic coffeemaker will then only need to be descaled once per year*. Limescale deposits in the water circuit are prevented for as long as possible by the filter.

* This figure is based on a 120 ml cup fill level with six dispensing processes per day and six filter changes according to the appliance information.
